

YouMix

YouMix is the ideal companion for any Production Video Mixer, allowing to add different and innovative features.

YouMix generates a complete video signal with multiple picture-in-picture (DVE) and multiple layers of complex graphics.

YouMix add contributions to your live programs with video calls (Skype®, Hangouts®, Zoom®, etc.), grabbing your desktop with a broadcast quality tool which allows to enrich the calls with CG and DVE effects, delivering the video via SDI/NDI/IP outputs.

Capture the NDI Skype® streams, compose and put on air in few clicks

Traditional video mixers do not allow to play files, decode IP streams, or generate complex graphics: with **YouMix** you can fulfil complex effects with a broadcast look without extra equipment and with no limit of DVE channels for PIP.

Each PIP window can display any SDI or NDI source, any IP stream or desktop video capture with smooth zoom in and out.

All graphics are also generated by **YouMix**, delivering a ready to use video signal output, freeing up other resources of your production video mixer.

BUILD YOUR OWN COMPOSITION

STATIC OR ANIMATED
BACKGROUND

LIVE VIDEO SIGNAL
FROM VIDEO CAPTURE CARD

SKYPE STREAM
OR ANY IP AND NDI STREAM

MULTIMEDIA FILE
GRAPHIC OR VIDEOCLIP

GRAPHIC OVERLAY
INDEPENDENT ON EVERY BOX

PC DESKTOP GRAB
DEFINE THE CAPTURED AREA

GRAPHIC OVERLAY
LOGO, ANIMATIONS, TEXTS...

In each **DVE** or background user can add:

Live sources coming from a capture card

IP streams coming from LAN/Internet

Desktop grabs (defining the captured area)

Video files in loop

Overlay graphics on background and PIPs

NDI inputs and outputs

Main Features

Grab desktop and incoming video calls from any PC or mobile device

Grab any NDI stream, like Skype®

Broadcast quality composite/SDI/NDI/IP output

CG titling with animated backgrounds, crawls, rolls, lowerthirds and logos
