Remote Control of innkeeper Digital Hybrids via the Web.

The RIU-IP is a remote control interface designed for the new innkeeper 1x, innkeeper 2, and innkeeper 4 digital hybrids. This unit contains a web server which allows the user to send and receive control data through their web browser.

RIU-IP can be connected to the user's computer NIC card for direct control, to a switch or hub for network control, or to an ethernet port with internet access for control from anywhere in the world.
